capaNCDT // Capacitive displacement sensors and systems

- Multi-channel system with sub-nanometre precision resolution
- Virtually independent of temperature
- Also measures against insulators
- As benchtop unit and as card carrier for a 19-inch format
- Integrated calculation function for thickness measurements
- Numerous filters, averaging, trigger functions, measured value storage, digital linearisation

System structure

The capaNCDT 6500 can be used for multi-channel operation and is modular in its design. Up to eight sensors can be connected to the signal conditioning electronics (Euro-size cards) via a preamplifier module.

For the DL6530 version, the pre-amplifier is integrated in the housing and is used for cable lengths up to 4m (with CC cable) or 8m (with CCg cable). For longer cable lengths, the external preamplifiers CP6001 or CPM6011 are used.

A measuring system with n measurement channels consists of:

1. controller DT6530 with power supply, display, Ethernet, oscillator and analogue output
2. n x demodulator modules DL6510 (DL6530 with integral pre-amplifier)
3. n x pre-amplifier connecting cables
4. n x pre-amplifier modules CP6001
5. n x sensor cables
6. n x sensors

DL6510: One item of position 2 to 6 is needed for each channel. DL6530: One item of position 2, 5 and 6 is needed for each channel.

Web interface

The controller is configured by the Ethernet which calls the web interface. Up to 8 channels can be visualised and combined arithmetically.
