

More Precision

opto**CONTROL** CLS-K // Fiber optic sensors

The optoCONTROL CLS-K series is an opto-electronic sensor solution where the electronics and the probe heads are coupled via optical fibers and therefore arranged separately. Due to numerous sheathings and probe heads, these optical fibers can be adapted to any application, therefore being flexible in use. Sophisticated, optical glass fibers stand out due to minimal installation dimensions and robust materials and are ideally suitable for harsh ambient conditions and high temperatures.

The optoCONTROL CLS-K series includes a compact transmitter and receiver unit for infrared light with integrated signal evaluation. The light transmission to the object and back is based on high-quality, optical glass fibers according to the principle of total reflection. The received light intensity is used for evaluation.

The optoCONTROL CLS-K electronics offers variable amplification possibilities; the output

signal is available for downstream systems as a voltage or current signal. In addition to these, there are versions with electrically isolated optocoupler or relay outputs, displays, as well as a special version that provides temperature compensation and is protected to IP65.

These fiber optic sensors enable a wide variety of applications, from monitoring the presence of and recognizing the position of components in automatic assembly machines, feeding systems, test and inspection applications, through to gap and web-edge detection.

Detection and inspection of small objects

High-speed processes

Integration in industrial environments

CLS-K Controller

- Compact and robust, direct integration into machine
- Ideal for monitoring of high-speed processes
- High light intensity
- Stable long-term behavior / transmission monitoring

High-quality glass and special fibers for long-life operation

Micro-Epsilon optical fibers feature high processing and transmission quality. Ground and polished end-faces ensure excellent optical integration with adapted sensors. These high-quality, optical glass fibers are extremely robust and ideally suitable for use in harsh ambient conditions.

Characteristics

- Temperature resistance from -270°C to $+2000^{\circ}\text{C}$
- Flexible and highly flexible with flux
- Cut and polished surfaces
- Wavelength from 180nm (UV) to 3500nm (IR)
- Customer-specific modification even for 1 single piece only

Probe heads for versatile applications

Reflex mode

V arrangement in reflex mode

Transmitted light mode

Order code for optical fibers

1 Function

(D = transmitted light mode, R = reflex mode)

Please define the accessibility of the spot to be inspected and the size of the measurement object for the appropriate function of the optical fiber and the diameter of the glass fiber bundle.

Range Transmitted light mode (typ.) ^{*1}		90mm	200mm	500mm	1700mm	2000mm
Min. object size (typ.)		≤ 0.05mm	≤ 0.1mm	≤ 0.1mm	≤ 0.2mm	≤ 0.3mm
Range Reflex mode (typ.) ^{*1 *2}	polished stainless steel	≤ 11mm	≤ 24mm	≤ 44mm	≤ 150mm	≤ 188mm
	raw aluminum	≤ 8mm	≤ 21mm	≤ 40mm	≤ 139mm	≤ 170mm
	white, rough plastics	≤ 6mm	≤ 10mm	≤ 21mm	≤ 21mm	≤ 80mm
	mat black cardboard	≤ 3mm	≤ 3mm	≤ 6mm	≤ 6mm	≤ 21mm
Required fiber bundle øF		0.6mm	1mm	1.5mm	2.5mm	3mm

^{*1}: reduced range with 90° angular probe heads

^{*2}: influences during reflex mode: distance, fiber bundle, reflectivity of surface (color, structure, gloss and surface treatment)

The probe heads to be used depend on the diameter of the fiber bundle.

2 Sheathing

Please determine the sheathing and the bonding of the optical fiber based on the prevailing environmental conditions and mechanical stress. Please contact us in case of high temperature applications or extreme, mechanical stress.

Silicone-metal sheath

Metal wire-spiral-reinforced hose with glass-fiber braiding and silicone rubber sheathing ¹⁾

Characteristics:

- Very flexible, ideal for frequent bending
- Highly resistant to bending, tension and torsion
- Temperature-stable from -60°C to +180°C
- Liquid-tight

T

VA stainless-steel sheath

Flexible stainless steel wire-spiral-reinforced hose ¹⁾

Characteristics:

- Flexible
- Protection against mechanical stress
- Temperature-stable to +400°C
- Stainless, typical for the food industry

E

Metal sheath

Flexible brass wire-spiral-reinforced hose, chrome-plated ¹⁾

Characteristics:

- Flexible
- Protection against mechanical stress
- Temperature-stable to +300°C

M

PVC-metal sheath

Flexible brass spiral-reinforced hose coated with PVC sheathing ¹⁾

Characteristics:

- Flexible
- Protection against mechanical stress such as pressure and tension
- Temperature-stable from -20°C to +80°C

Z

PVC special sheath

Plastic hose ²⁾

Characteristics:

- For rigid installation
- Small sheath diameter
- Temperature-stable to 60°C

P

BOA special sheath

Corrugated tube with stainless steel braiding ²⁾

Characteristics:

- Protection against mechanical stress
- Ideal for drag-chain applications
- Temperature-stable from -270°C to +600°C

On request

Special models

Optical fibers with increased vibration protection - VS option

Optical fibers can be manufactured with increased vibration protection for use with mechanical loads such as shock, acceleration, and movement.

This special treatment minimizes friction between fibers and reduces shocks. The fibers are embedded into a gel cushion.

Special models

Optical fibers with special bonding for high temperatures

Standard bonding is suitable for maximum temperatures up to 80°C. Special adhesives allow for temperatures of up to 250°C and even 400°C. These higher temperature ranges require the use of Type E stainless steel sheathing. With quartz and sapphire fibers and appropriate adhesive, special optical fibers for use in environments up to 2000°C can be produced.

¹⁾ Bending radius corresponds to three times the external diameter of the sheath.

²⁾ Bending radius corresponds to twice the external diameter of the sheath.

Details about sheath diameters can be found in section 3.

3 Probe heads and fiber bundles

Please choose a probe head type and ensure that the probe head is compatible with the fiber bundle diameter $\varnothing F$ (see 1) and the sheath (see 2).

Standard probe head bonding for -10°C to $+80^{\circ}\text{C}$
Please refer to the technical data for special models (T250, T400).

All details in mm; tolerances: typ. $\pm 0.1\text{mm}$
Alu ferrules, black anodized

Please contact us if you require other dimensions.

Optical fiber functions

Application instructions on selecting the appropriate function.

Reflex mode

- Max. measurement distance 180mm
- Easy and fast installation
- Detection of smallest objects from 0.2mm
- Intensity evaluation to determine position, gloss level, gray value, presence
- Ideal for part recognition, counting tasks, presence monitoring

Reflex mode V arrangement

- Max. measurement distance 1000mm (with reflecting surfaces)
- Easy adjustment due to mounting accessories
- Very exact positioning of the switching point
- Objects generate highest intensity on the intersection
- Immune to dust and particles in the beam path

Transmitted light mode

- Large distance between receiving and transmission unit up to 2000mm
- Objects are detected by interruption of light beam
- Arbitrary point of light transmission
- High reproducibility of the object transmission
- Intensity measurement with semi-transparent objects
- Ideal for part recognition, counting tasks, edge detection, presence monitoring

Available on request

Special types for multiple reflex mode

Transmission and receiving fibers are, statistically mixed, guided in two or more separated optical fibers. Therefore, several positions can be detected using only one sensor.

Available on request

Special types for multiple transmitted light mode

The light path of the axially opposing probe head ferrules is interrupted or damped by one or more objects.

- *Focusing of fiber optic sensors*
- *Improving the efficiency of the application*
- *Many possible applications*

Features:

- Working distances from 8mm to 200mm
- Scratch-resistant glass lens
- Robust aluminum housing (black anodized)
- Bundling to a small light spot
- Increasing the range
- Minimum color change when the distance is altered
- High luminous efficiency
- Special designs according to customer requirements
- Recognition of highly absorbent objects

Available on request

Focus lenses for special applications

Detection and inspection of small objects

Edge detection of PCBs

Inspection tasks with high ambient temperatures

Counting tasks with bulk material

Presence check of components

Packaging control of blisters

	Response time $\leq 120\mu\text{s}$
	Switching frequency $\leq 4\text{kHz}$
Analog	Analog output 0.1 - 5VDC

Features:

- Scanning distance up to 180mm*
- Range of up to 2m*
* depending on the fiber bundle diameter
- Switching output: NPN, PNP, optocoupler and relay
- Adjustable drop-out delay 5-100ms (optional)

Applications:

- Powerful infrared emitter
- Test & measurement tasks
- Position recognition of small parts
- Position and assembly monitoring on automatic assembly machines and feeding systems
- Presence monitoring
- Checking length and diameter

Advantages:

- Precise and reliable object detection
- Low drift due to transmission monitoring, making it particularly suitable for measuring tasks
- High switching frequency and short response time
- Sensor monitoring via analog signal
- Stable long-term behavior by monitoring and regulating the emission of the transmitter diode
- High light power in the non-visible infrared range
